

C.BIRD

Breaking Boundaries in Cell Culture

The next generation microbioreactor for cell line development (CLD). Reduce the amount of time required to culture cells by identifying suitable clones faster and more reliably.

Bring cells into suspension culture (only for suspension cells)

Increase oxygen transfer rate (OTR) for both adherent cells and suspension cells

Low shear rate mixing to reduce stress on cell lines

Continuous mixing for homogenous media composition

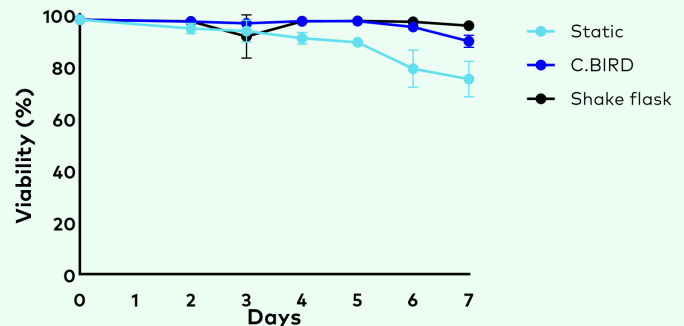

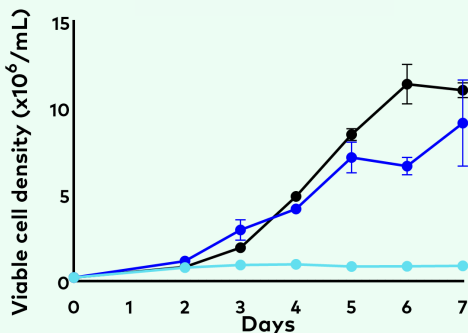

Higher cell density, protein yield, productivity

Shortens cell line development process

C.BIRD enable shake flask like culture condition in early stage
